

Coe Fen Species List

The following tables list the species that the CNHS has recorded in the Coe Fen area. If you note any other species during your own walks, please send Jonathan Shanklin j.shanklin@bas.ac.uk details of the additions. Areas are identified as follows (see also location map at <http://www.cnhs.org.uk/>): M = Mill stream, R = River, SD = Sheep's Green drain, SL = Sheep's Green sluice stream, CD = Coe Fen ditch, SN = Sheep's Green north, SS = Sheep's Green south, CN = Coe Fen north, CS = Coe Fen south, CX, = Island between Sheep's Green and Coe Fen, FC = Fen Causeway roadside, VB = Vicars brook area, L = Lammas land, P = Paradise. X indicates that the species was recorded in 2005 - 2009. A number indicates a record in 2010 – 2019. A or E (if reported previously) indicates that despite searching the species was not seen. Q indicates that the species needs confirming. For Paradise: ? indicates that the species was reported in a recent species list and # in the 1989 nature trail guide, but we need to confirm that it is still present, and N indicates a new species that was not noted on this list. Elsewhere ? indicates a species that is recorded in Coe Fen, Paradise, Sheep's Green or Vicars Brook in Gigi Crompton's Internet list (<http://mnlj.com/ge>) during the last 100 years – details are given in the separate list.

Notable or rare species for the area include *Catabrosa aquatica* (Whorl grass), *Dactylorhiza incarnata* (Early marsh orchid), *Dactylorhiza praetermissa* (Southern marsh orchid), *Dipsacus strigosus* (Teasel), *Epipactis phyllanthes* (Green flowered heleborine - 1987), *Hypericum tetrapterum* (Square stemmed St John's wort), *Lathraea clandestina* (Purple toothwort), *Leucosium aestivum* (Summer snowflake), *Petasites hybridus* (Butterbur), *Potamogeton praelongus* (Long-stalked pondweed – 1959), *Potamogeton trichoides* (Hairlike pondweed – 1999), *Rorripa amphibia* (Great yellow cress), *Stellaria uginosa* (Bog stitchwort – 1950), *Aromia moschata* (Musk beetle – a green beetle found near willow in July/August), *Micromys minutus* (Harvest mouse). Please record the exact grid reference for any of these species.
