

Trumpington Meadows

The following tables list the species that the CNHS recorded on walks round Trumpington Country Park during 2012. The number indicates the month it was first seen. Some species may be mis-identified. Lack of an entry does not necessarily indicate that the species isn't present. Individual record cards of vascular plants for each monad are on the web, on those lists, species crossed out have been recorded in the Country Park, those with the number crossed out have only been noted outside the site. Rare plants that might be seen include Cornflower *Centaurea cyanus*, Sharp-flowered Rush *Juncus acutiflorus*, Changing Forget-me-not *Myosotis discolor* and Cut-leaved Self-heal *Prunella laciniata*.

Status: C = scarce in Cambridgeshire, N = nationally scarce, BP = Byron's Pool

Key: C = caterpillar, D = dead, X = sighting (or heard or signs), J or T = not in the Park, but in monad.
